SUMMARY

Georgia Tech M.S. Computer Science student and product-minded software engineer building and releasing production web, mobile, backend, cloud, and data systems. Owns features from ambiguous requirements and system design through implementation, testing, deployment, monitoring, and iteration. Shipped an App Store product and merged engineering contributions to Elastic, Uber, Google, and NVIDIA across React/TypeScript, Java, Python APIs, and CUDA C++.

EDUCATION

Georgia Institute of Technology | Online M.S. Computer Science **Expected May 2028**

- Online program format supports full-time internship and employment availability.

California State University, Sacramento | B.S. Computer Science **Dec. 2025**

SOFTWARE ENGINEERING EXPERIENCE

Software Engineer | California Department of Health Care Services (DHCS) **May 2025 - Present**

- Develop Java, Python, and .NET applications, backend services, ETL workflows, and DB2/SQL integrations across legacy and distributed production systems.
- Built 7 cross-system validation checks plus reporting, logging, monitoring, and alerting integrations, improving data accuracy 40%, validation reliability 20%, detection time 50%, and incident resolution time 30%.
- Partner with users, analysts, engineers, and QA to turn requirements into specifications, tested features, production releases, and documented outcomes through the Agile SDLC.

Software Engineering Intern | District Hut **May 2024 - May 2025**

- Scaled Python/AWS data pipelines to 3 TB/week and automated 75% of SQL validation, preventing 5 critical production incidents while maintaining 100% test coverage.
- Collaborated with 3 engineers on metrics-triggered cloud automation, eliminating 6 hours/week of manual work and improving real-time integration reliability 18%.

Student Assistant, IT Help Desk | California Housing Finance Agency (CalHFA) **Jan. 2022 - May 2024**

- Resolved 50+ weekly application, endpoint, network, and access requests for 200 users at 95% first-contact resolution; documented solutions and coordinated escalations.

OPEN SOURCE SOFTWARE ENGINEERING

Elastic EUI | React, TypeScript | [Merged PR #9971](#) **Sep. 2026**

- Modernized a production data-grid resizer from a class component to React hooks, added event-listener cleanup, and rewrote tests around real DOM interactions; passed 500 tests plus TypeScript and lint checks.

Uber NullAway | Java | [Merged PR #1765](#) **Sep. 2026**

- Modernized Java static-analysis test infrastructure by inlining 9 remaining test sources, consolidating shared fixtures, and preserving all 46 targeted tests.

Google MCP Security | Python, APIs | [Merged PR #283](#) **Aug. 2026**

- Fixed API argument and date handling in a SecOps rule-detection workflow, exposed usable time filters, and passed all 18 unit tests.

NVIDIA CCCL | CUDA C++ | [Merged PR #10881](#) **Aug. 2026**

- Improved cross-compiler portability by replacing raw C++ attributes with the CCCL compatibility macro across 4 CUDA headers and validating the change through CI.

SELECTED PRODUCT & PLATFORM PROJECTS

Al-Manar - Production Mobile Application | Flutter, Dart, REST APIs | [GitHub](#) | [App Store](#) **2026 - Present**

- Own architecture, user-interface implementation, API integration, unit testing, release engineering, deployment, and production support for an App Store application serving users in 9 languages.
- Integrated Google Places and device location, added accessible alternatives, and established Xcode Cloud CI/CD for reliable feature delivery and product iteration.

SENTRY - Tested Backend Service | Python, FastAPI, Docker | [GitHub](#) **Jun. 2026**

- Deployed an authenticated, rate-limited API with monitoring, GitHub Actions CI/CD, and 143 passing tests; evaluated 10,000 outputs and reduced unreliable responses 35%.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, Java, Python, Go, C#, C++, C, SQL, Dart, Swift

Full Stack & Data: React, Node.js, Spring Boot, .NET, FastAPI, Flask, Flutter, REST APIs, PostgreSQL, DB2, Redis, ETL, API Design, UI Development

Computer Science: Data Structures, Algorithms, Object-Oriented Design, System Design, Distributed Systems, Databases, Debugging, Performance Analysis

Cloud & Delivery: AWS, GCP, Docker, Linux, Git, GitHub Actions, CI/CD, Xcode Cloud, Unit and Integration Testing, Code Review, Agile SDLC, Monitoring, Logging
