SUMMARY

Storage architect and software engineer supporting mission-critical government infrastructure and building production software across mainframe, distributed, cloud, networking, and AI systems. Brings enterprise zSystems/storage operations, measurable data-reliability improvements, a from-scratch packet analyzer, published AI evaluation research, and merged systems contributions to Google, NVIDIA, and Uber.

EDUCATION & CERTIFICATIONS

Georgia Institute of Technology | M.S. Computer Science | GPA: 4.0
California State University, Sacramento | B.S. Computer Science | GPA: 4.0
Certifications: Cisco CCNA, CompTIA Security+, CompTIA Network+, CompTIA A+

ENGINEERING EXPERIENCE

Storage Architect | California Department of Technology (CDT) **2026 - Present**
- Architect and support enterprise zSystems storage infrastructure for mission-critical state services, planning platform and capacity changes across DASD, virtual tape, cloud storage, and SAN environments.
- Install, test, monitor, tune, and troubleshoot storage hardware and software; recommend resilient architecture and strengthen operational and disaster-recovery readiness with technical teams, vendors, and customers.

AI Research Engineer | Medical AI Research | **SpineFairBench** | **MedInsider** **2025 - Present**
- Co-authored 2 reproducible medical-AI studies spanning 7,996 paired radiographs, 840 simulated clinical scenarios, and 9-model panels; built Python/PyTorch ingestion, scoring, audit, and failure-analysis workflows.

Software Engineer | California Department of Health Care Services (DHCS) **2025 - 2026**
- Developed Java, Python, and .NET applications, ETL workflows, and DB2/SQL integrations across legacy mainframe and distributed production systems supporting regulated Medi-Cal operations.
- Built 7 cross-system validation controls plus logging, dashboards, monitoring, and alerts, improving data accuracy 40%, issue detection 50%, and incident resolution time 30%.

SELECTED SYSTEMS & PRODUCT ENGINEERING

pilotfish - Packet Analyzer | Python, ctypes, libpcap, BPF | **GitHub** **2026**
- Built a macOS packet analyzer from scratch with custom libpcap and /dev/bpf capture, memory-mapped pcap/pcapng I/O, TCP/IP reassembly, Wireshark-syntax display filters, and decoding through DNS, HTTP, TLS, and SSH.
- Exposed 467 Wireshark-compatible fields; validated about 33,000 decoded values and 7,200 filter results against tshark, with fuzzing, strict typing, CI, and compiled filters running 7x faster at the median.

Al-Manar - Production Mobile Application | Flutter, Dart, REST APIs | **GitHub** | **App Store** **2026 - Present**
- Own architecture, API integration, testing, release engineering, and production support for an App Store application serving users in 9 languages with location-aware features and Xcode Cloud delivery.

MERGED OPEN-SOURCE SYSTEMS CONTRIBUTIONS

Google gVisor | Go, Linux, VFS | **PR #14395** **2026**
- Added Linux-compatible ETXTBSY protection for executing binaries across tmpfs, gofer, and overlay filesystems; validated 63 execution tests plus checkpoint/restore behavior.

NVIDIA CCCL | CUDA C++, Compilers | **PR #11059** **2026**
- Replaced roughly 1,300 cascading CUDA errors with one actionable configuration diagnostic, validated across Clang/GCC, C++17/C++20, and CUDA/non-CUDA paths.

Uber NullAway | Java, Static Analysis | **PR #1887** **2026**
- Upgraded the Caffeine JMH benchmark to 3.3.0, enabled its JSpecify configuration, and restored previously ignored benchmark-compilation coverage.

TECHNICAL SKILLS

Languages: Python, Java, Go, C, C++, C#, SQL, TypeScript, JavaScript, Bash, Dart
Systems & Infrastructure: zSystems/zOS, Enterprise Storage, DASD, Virtual Tape, SAN, Disaster Recovery, Linux, TCP/IP, libpcap, BPF, Operating Systems, Distributed Systems, Mainframe and Client/Server Environments
Cloud & Software: AWS, GCP, Docker, FastAPI, Flask, .NET, Flutter, REST APIs, DB2, PostgreSQL, Redis, ETL, PyTorch, System Design
Delivery & Reliability: Git, GitHub Actions, CI/CD, Unit/Integration/Fuzz Testing, Monitoring, Logging, Performance Analysis, Root-Cause Analysis, Incident Response, Agile SDLC, Technical Documentation
